Abstract (en)

[origin: WO2007132290A1] The invention relates to a hanging cabinet wherein the doors (6, 7), when opened, are overturned outside the structure formed by the upper and lower walls (2, 3) and the sides (4, 5) of the cabinet. Advantageously, the hanging cabinet is horizontal and the doors move simultaneously, so that in the wide open condition they are partly juxtaposed to the upper wall (2) and to the lower wall (3): this provides easy access to the entire inner space of the cabinet, and the doors can be closed easily even by a short person. The invention also comprises a device for overturning the doors simultaneously.
