Abstract (en)
[origin: WO2007131598A1] The subject matter of the invention is a motor vehicle window lifter with a drive mechanism, with a force transmission mechanism to transmit force from the drive mechanism to a window pane, with a control mechanism to control the drive mechanism and/or the force transmission mechanism, which is designed in such a way that a force alternately directed upward and downward will automatically be transmitted to the window pane when the window pane is jammed.
