Abstract (en)
[origin: WO2007128736A2] The invention relates to a refrigeration device comprising an inner chamber that is delimited by an inner shell, an outer shell (1, 2) and an intermediate chamber that is arranged between the inner shell and the outer shell and that is filled with an insulating foam. Said refrigeration device also comprises a device for mounting electrical components and/or switches and/or displays, and a housing (15) equipped with an opening for mounting on a cut-out section (3) in the outer shell (1) and a front panel (4) for covering said cut-out section (3). According to the invention, the housing (15) lies in a gap and is supported on the inner face of the outer shell (1).
