Abstract (en)

[origin: WO2007137715A1] The surfaces (2) of components (1) of a weapon etc. that are subject to external environmental influences are provided with a hydrophobic and oleophobic protective layer (3), said layer imparting an anti-corrosion protection and allowing an increased ease of maintenance since the weapon can be cleaned more effectively and easily. The protective layer used can be polysiloxane that is applied by nano-coating technology.
