Abstract (en)

[origin: WO2007131272A1] A tilting alarm system (10) for a machine having a prime mover and an articulated component such as a roller includes a pendulum switch (11) adapted to sense the transverse tilt angle of the roller with respect to the prime mover and an audible and/or visual alarm (20, 21, 22) adapted to be activated by the pendulum switch when the tilt angle exceeds a predetermined value.
