Abstract (en)

[origin: WO2007141302A1] Cryptographic device consisting of at least a red zone (1), a black zone (2), a management zone (3), a cryptographic resource (4), consisting of at least the following elements: - a host domain (5) including the red zone (1), the black zone (2) and the management zone (3) logically separated, - the cryptographic resource (4) communicating with the elements of the host domain (5) via the following interfaces: - a red interface (10) for data emitted into the black zone, - a management interface (12) for data emitted into management zone, - the three interfaces (10, 11, 12), physically separated, - the cryptographic domain being physically separated from the host domain.
