Abstract (en)

[origin: WO2007132056A1] The invention relates to a method and a system for loading value to a smartcard that is arranged to function in a telecommunications system. The telecommunications system comprises an order system provided or maintained, for example, by a first service provider, such as a telecommunications operator. The order system is linked to a mobile communications system in such a way that it is possible to transfer messages from the order system to the mobile communications system and especially to a mobile terminal equipment connected thereto. The mobile terminal equipment comprises a smartcard and an NFC interface communicating with the smartcard. Further, the system comprises a card reader provided with an NFC interface. In the method, a voucher is created in the order system and transferred to the mobile terminal equipment. According to the invention, the voucher is transferred to the card reader via the NFC interface. The voucher is verified with the card reader and transformed into a smartcard value file. The value file is saved on the smartcard.
