Abstract (en)

[origin: EP2022605A2] The holder (11) has a suction head (13), and a touch valve with an actuator protruding from an intake area (16) of the suction head, where the intake area is provided to intake a workpiece. The actuator actuates the touch valve, which produces a vacuum at the intake area, opens a fluid connection to a vacuum connection of the holder. The suction head is an integral part of a suction head holder (12) for holding the suction head, where the suction head is detachably fastened to the head holder and is removable from the head holder, and the suction head has an opening for the actuator.
