Abstract (en)

[origin: EP2022921A1] The device (1) has a clamping bolt and a wallet shaped nut with a base portion (6) pre-mounted on an edge of a support e.g. glass, and a part in a form of a shutter (8) pivoted between opened and closed positions of the nut. The shutter comprises a locking tab (21) and a hooking element (23) to lock the shutter on U-shaped elements in the closed position. The elements comprise two reinforcement arms (14) in which each arm is arranged with a predetermined distance to top of another edge (16) of a bottom plate (12), and a ring washer (26) is made of elastically deformable material.
