Abstract (en)
[origin: EP2022926A2] The strap (1) has a metal band (3) i.e. steel band, including a retaining part (5) that is connected with the metal band by a riveted bolt (7), in a rotationally secure manner. The metal band comprises serrations (9) in asteroidal shape or intersecting in an area of the retaining part. Indentations (11) are defined by the serrations and formed in such a manner that the indentations protrude from a strap section. A crimp (13) or a stamped part is formed at the metal band in an area of joints on the retaining part. The retaining part is formed as a plastic part or a pressure die casting part. An independent claim is also included for a method for manufacturing a retaining strap.
