Abstract (en)

[origin: EP2022930A2] The hanging has multiple lamellas (3) with longitudinal edges arranged parallel to each other. Multiple strips (11) are arranged orthogonal to the longitudinal edges of the lamellas. Connecting parts (14) are formed at the lamellas, and retaining parts (10) are formed adjacent to the connecting parts. A bolt (12) removably connects the connecting parts with the adjacent retaining parts. The connecting parts and/or retaining parts include an elastic spring region for rest-and snap connection. Independent claims are also included for the following: (1) a device for connecting a lamella with a strip of a hanging (2) a method for connecting a lamella with a strip of a hanging.
