Abstract (en)  
[origin: EP2023063A2] The element (2) has two profile-elements that are interlocked or joint with one another. The profile-elements form a profile structure-unit in an assembled condition. One of the profile-element forms a base profile (4) that is connected with a door frame of a door body. Other profile-element forms a cladding profile (6) that is connected with the base profile. The cladding profile is provided for cladding sub-areas (12, 16, 18) of the base profile. The base profile and the cladding profile are manufactured from plastic materials that are welded with each another. Independent claims are also included for the following: (1) a method for manufacturing a door frame-closing element (2) a method for manufacturing a household device.
