Abstract (en)
[origin: WO2007134348A1] The invention relates to a cable shutter (2) for a table (1), in particular a desk, it being possible for the shutter to be adjusted between a closed position and an open position by means of a guide arrangement (18), wherein an outer side (15) of the cable shutter (2), in the closed position, forms a continuation of an adjacent table surface (14) formed by a table top (4), in particular lies in the same plane as this table surface, and in the closed position, at least in one section of the cable shutter (2), a gap (7), through which a cable element (8) can be led, is formed by a spacing (22) between the cable shutter (2) and table top (4). Starting from the closed position, the cable shutter (2) can be raised, by means of the guide arrangement (18), first of all at least more or less largely at right angles to the outer side (15) of the cable shutter (2) and can then be pivoted into the open position.
