Abstract (en)

[origin: CA2654058A1] Device for regulating feeding by measuring data relating to the intake of food by mouth during meals, by means of cutlery furnished with a handle and with a food-gripping head and by pedagogically restoring these data to the user so as to alter the movements and/or the kinetics of his or her body during mealtimes, characterized in that the food-gripping head is conductive and in contact with a data processing circuit comprising a circuit for sensing potential, the grasping surface of the handle being insulated from the food-gripping head.
