Abstract (en)
[origin: WO2007142830A2] A radiolucent bone drill and/or impact drill is provided, which includes a first portion connected to a second portion. The first portion defines a first axis and the second portion defines a second axis. The second axis is disposed at an angle relative to the first axis. A third portion is connected to the second portion. The third portion has a shaft extending therefrom. The shaft includes a distal end configured to engage bone. The bone drill may include a radiation protection guard mounted to the first portion. A cavity drill is provided, which is configured for use with a bone drill. A forceps and a fluid transfer device are provided, which are adapted to treat a vertebral body. A vertebral treatment system and methods of use are also provided.
