Abstract (en)

[origin: WO2007128333A1] A laser machining machine (101) features a device for ventilating the laser beam channels (106) on the laser machining head (104), over which the beam channel (106) is formed open in the direction of the tool (107'). At the same time, a first gas inlet (111) into the laser beam channel (106) for a first gas and a second gas inlet (112) into the laser beam channel (106) for a second gas are provided.
