Abstract (en)
[origin: US2011049165A1] The present invention relates to a tank container (1) having a tank (2) and a framework which receives the tank (2) via end frames (3). Here, the end frames (3) are connected to one another in the lower region via a longitudinal frame structure (5), wherein at least two lateral longitudinal carriers (12) are provided which, in their end regions, have in each case one lateral diagonal member (14) which extends between the longitudinal carrier (12) and a corner support (18) and one base diagonal member (16) which extends between the longitudinal carrier (12) and a lower transverse spar (26, 26'), wherein the base diagonal member (16) and/or the lateral diagonal member (14) have/has an open cross-sectional profile.
