Abstract (en)  
[origin: WO2007141479A1] A barrier adapted to be set up for temporary traffic control comprises a man-portable unit (1) placed on the ground from which a boom (2), preferably in the form of a reelable tube, can be withdrawn. The boom (2) extends at an oblique angle to the ground in its "down" position and a motor within the ground- standing unit (1) can raise and lower it between that position and an "up" position at a greater angle to the ground in which traffic can pass.
