Abstract (en)
[origin: WO2007140876A1] A hinge which has a frame hinge part to be fastened via an associated fastening part (1) to a fixed frame, and a wing hinge part which is to be fastened via an associated fastening part (1) to a wing and can be pivoted about a hinge axis (12) in relation to the frame hinge part, wherein at least one of the fastening parts (1) is mounted displaceably at least linearly by means of a retaining part (2) to be fastened in a fixed manner to the frame or the wing, wherein an accessible adjustment element (3) is arranged on the retaining part (2), and wherein an axis of rotation of the adjustment element (3), which axis of rotation is associated with the adjustment of the rotational movement, lies essentially perpendicularly to the plane predetermined by the fastening part and the hinge axis.
