Abstract (en)  
[origin: WO2007141400A1] The cartridge of gas-liquid fuel, includes a reservoir presenting a perforable section (6) on its surface, and a device designed to prevent or reduce the amount of fluid escaping under pressure after the cartridge is punctured, consisting of a bearing (7) equipped with a joint (8) designed to be applied used against the wall of the reservoir. The bearing (7) includes, with regard to the perforable section (6), a central part (12), situated at an initial distance (d1) from the section of a perforator (P) designed to penetrate into the reservoir and a peripheral part (13) situated at a second distance (d2) from the perforable section (6), higher than the length of the perforable section (P) designed to penetrate into the reservoir.
