Abstract (en)
[origin: WO2007141194A1] The measuring tube (1) of the in-line measuring device is formed using a supporting tube (2) and a liner (3) which lines the inside of it and adheres to the supporting tube with the interposition of a mediating primer (4). Both the primer (4) and the liner (3) at least partially comprise polyurethane. In particular, both the polyurethane of the liner and the polyurethane of the primer are kept suitable for drinking water, so that the in-line measuring device is also suitable for measuring drinking water.
