Abstract (en)
[origin: US2007171196A1] The method of operating a controller interface and an interface for a controller has a display, a plurality of manual user input mechanisms for receiving user input, a processor, and memory. The interface includes an actuation mechanism configured for receiving an actuation by a user and a user interface module coupled to the input mechanism for receiving an indication of an actuation of the actuation mechanism by the user. The user interface module is configured to receive one or more of actions from either a user input mechanisms or a soft key module and store the received one or more actions, and to execute the stored one or more actions in response to receiving the actuation indication.
