Abstract (en)

[origin: EP2242028A1] The electronic key has a plastic housing (20) with an electronic unit for data communication with the closing device. A receptacle (22) is provided on the housing that has conductive contact elements (28,29) in which an energy store is inserted. A sealing element (23) that encircles the contact elements is permanently placed on the receptacle, and the bottom of the lid rests on the sealing element, thus forming a reliably sealed receptacle, which is delimited by the lid and the housing.
