Abstract (en)  
[origin: WO2007133129A1] The present invention relates to an audio/video-call system for allowing communication between a first user and a second user, the communication includes data stream comprising control signals, and audio and video data, the system comprising: a first and second communication systems separated geographically, wherein the first user control both of the communication systems, and wherein each of the communication systems include a video camera, a microphone, an network connection for connecting the communication system to the network. The network connection is used for sending a data stream initiating a call from the first communication system to the second communication system, and for transmitting the data stream between the first and the second communication systems once the call is initiated.
