Abstract (en)

There is described a supporting device (1) of at least one flexible material container (2) adapted to contain consumer products; the supporting device (1) comprises a tubular body (10), elongated along an axis (A), graspable by one hand and defining a seat (11) engageable by at least one handle (5) of said container (2); the body (10) comprises in turn a pair of end edges (12, 13) reciprocally adjacent and delimiting said seat (11), and is furthermore displaceable between a first operative configuration, in which the edges (12, 13) withhold the handle (5) inside said seat (11), and a second operative configuration, in which the handle (5) may be removed from said seat (11).
