Abstract (en)

[origin: EP2025408A1] The method involves controlling parameters such as milling speed, temperature after milling and primary air quantity. Pre-control curves are provided for controlling the milling speed, the temperature after milling and the primary air quantity, where the pre-control curves exhibit minimum and maximum curves. The pre-control curves are determined depending on coal throughput. The pre-control curve of the milling speed is corrected depending on a state of wear of a mill-tool of a coal dust fan mill. An independent claim is also included for an arrangement for controlling a pulverized drying process of raw lignite.
