Abstract (en)

[origin: EP2025611A1] The unit (100) has two articulation elements (10, 40) that are not pivotable relative to each other in one state and are pivotable in a pivot plane in another state. The element (10) has a guide surface (16), which is arranged in such a manner that the elements are transferred from relative position of the former state into the latter state by relative movement of the elements along the guide surface. A projection (14) is provided on a side surface (15) of the element (10), where the side surface is parallel to the pivoting plane. The guide surface is provided on the projection.
