Abstract (en)
[origin: EP2025792A1] A brushing machine for fabrics comprises a plurality of rotating brushes (108, 109, 110) for surface treatment of a web (101) of fabric. Each brush (108, 109, 110) is associated with a contrast element (1) suitable to define, in cooperation with the brush (108, 109, 110), a span through which the web (101) can pass. The contrast element (1) can operatively abut the respective brush (108, 109, 110) in order to press the web (101) against the brush (109).
