Abstract (en)
[origin: EP2025799A1] The stand (1) has upper, middle and lower drying grids (2 - 4) arranged in planes lying on top of each other, where one of the drying grids is useable at both sides. A horizontal position of one of the grids is changed relative to another drying grid by rotating around 180 degrees around a horizontal axis (5), where the grid is eccentrically and rotatably supported at the axis. The grids are arranged accurately on top of each other in a drying position, where each grid is horizontally displaced to another drying grid and is temporarily transferred to a vertical position.
