Abstract (en)

[origin: EP2025805A2] The device has a strut and/or an anti-strut formed in two-pieces. The strut is established from a fixed stationary part (46) and an interconnected movable part (45). The stationary part has a guide (42) or an anti-guide, and the movable part has a rotary fastening part or rotary anti-fastening part. A power generator is provided to move away the movable part from the stationary part and to maintain a rotary warp section (25) in a tight manner. The power generator is arranged between the stationary part and the movable part.
