Abstract (en)
The panel consists of the panel element (1) fastened on the pillar member (4). The panel member (1) is a piece of cloth (3) in the form of a bag made of elastic material and slid on the frame member (2) or has a shape and dimensions corresponding to those of the frame member (2). The frame member (2) is made of a section and fastened to the pillar member (4) with two generally vertical tubular sections (5) spring loaded in the longitudinal seats (7) resembling a part of sleeve cut off along the plane parallel to its axis, placed opposite to each other on both sides of the tubular pillar (6). There are holes aligned in the walls of tubular sections (5) and the pillar (6) where a mandrel is passed through (8) with preferably threaded ends on which coil springs (9) are slid with a slight play and blocked against sliding down with the locks (10). Alternatively, the frame member (2) is made of a section and fastened to the pillar member (4) that in whole or in part has the shape of the section or is U-shaped with extended arms made of a flat bar or elastic band.
