Abstract (en)

[origin: EP2025833A1] The holder is designed as a molded part (1), which receives a section of a cable (13) that forms a bent cable eye (12) from three sides in a form-fit manner and which is removable from a precast concrete part and the cable eye after casting the concrete part. An essentially linear cable loop end (11) is sealed in a formwork with concrete, where the eye is bent around ninety degrees in relation to the end. The cable eye runs along a front or side surface of the concrete part after casting the concrete part and removing the formwork and is hinged into a position perpendicular to the surface.
