Abstract (en)

[origin: EP2025843A2] The window or door comprises a locking section (1, 1?) between the wing and frame, as well as a drift rod fitting (32) and at least one movable locking element (31, 33) on the fitting rigidly connected to the frame associated with the locking section and mountable via the fitting in a closed position and an open position in which the wing is turnable from the frame. The locking section consists of a base body (2) and a coupled locking plate (3, 3?). The base body has a receiver (24) for a roll (11) which can be associated with the wing via a mound (35).
