Abstract (en)

[origin: EP2025945A2] The machine has an annular recess (5) arranged in a ring channel wall of a housing and/or a shaft (2). A limiting point of the recess comprises a distance from a front blade tip point, and all distances parallel to lines connecting the front blade tip point and a rear blade tip point are measured. Other two points define characteristics of the wall of the recess at a distance of 0.75 lengths and 0.25 lengths from the front blade tip point. A connection line with another connection line encloses an angle of minus 15 degrees to 30 degrees.
