Abstract (en)  
[origin: EP2026019A2] The unit has a cooling medium circuit (K) in which a compressor (1), a plate heat exchanger (2), an expansion valve (5), an evaporator (6) and a condenser in a form of another plate heat exchanger (3) are arranged in series connection. The heat exchanger (2) is provided for heat dissipation in the medium circuit. Connection lines of the medium circuit or a heat transmission medium circuit (W) are guided to the heat exchanger (3) by switching valves (96, 97), which are switchable for reversal of a flow direction of a cooling medium and a heat transmission medium in the heat exchanger (3).
