Abstract (en)  
[origin: EP2026145A2] The clock has a rotatable locating disk including different information areas that are alternatively visible via a display window by rotating the locating disk. A maltese cross (9) is in effective connection with the locating disk via an adjusting unit (11) that is eccentrically rotatable at a rotation axis (8). The maltese cross is rotatable around 90 degrees by an adjusting pin with respect to the hour hand. The adjusting unit rotates the locating disk around a preset rotation angle based on the circumference distance of the information areas.
