Abstract (en)
[origin: EP2026146A2] The panel (1) has programming units (4) and a single or multi-part programming unit carrier (2, 3), which is arranged to swivellably store the programming units between two end positions, where the end positions correspond to two possible programming, respectively. The programming unit comprises two display and operation sections (41, 42) for indicating the position of programming units, where one of the sections makes possible rotation of programming units in one of the end positions and other makes possible rotation of programming units in other end position by a user.
