Abstract (en)
[origin: EP2026422A2] The connector has a plug-in part (2) such as jack, and another plug-in part (3) e.g. socket, comprising corresponding two plug contacts that are formed together. The plug-in part (2) has a sleeve-like base body (6) which comprises an opening, and a stop body (8) is supported in the base body in a relatively movable manner. The base body is engaged into a recess (9) at a plug-connected state of the two plug-in parts, where the recess is formed at the plug-in part (3). A sleeve (10) and a ring (11) are formed in an axial direction in the relatively movable manner. Independent claims are also included for the following: (1) a jack of a plug-in connector (2) a socket of a plug-in connector.
