Abstract (en)

[origin: WO2007144171A1] The invention relates to a safety bandage (100) for limiting the mobility of a patient lying on a support, or for positioning a patient on a support, with a retention strap (10) to which a body strap (14) enclosing the patient's body in the abdominal area is connected, wherein closure means are provided for the retention strap (10) and the body strap (14). To improve a safety bandage (100) of this kind in such a way as to ensure a reliable fixing of the patient in a supine position, the invention proposes that the retention strap (10) and the body strap (14) are fixedly connected to each other.
