Abstract (en)
[origin: US8695496B2] The invention describes an insert element (1) for a stamp, with several setting wheels (9) disposed adjacent to one another which are rotatably mounted on a shaft (7) of an insert body (2). The setting wheels (9) are designed to support typeface belts (10). The typeface belts (10) are covered at least in the region of the setting wheels (9) by a cover element (12) which in turn has end regions (19, 20) spaced apart from one another in the direction of the shaft (7) and is provided with slots (13) through which setting wheel circumferences (11) extend. In order to couple the cover element (12) with the insert body (2), at least one coupling mechanism (15) is provided, which comprises respective co-operating coupling elements (16, 17) on the insert body (2) and on the cover element (12). The coupling elements (16, 17) are designed so that the direction of the relative coupling movement of the coupling elements (16, 17) with respect to one another is oriented approximately in the direction of the shaft (7) of the insert body (2).
