Abstract (en)

[origin: GB2438869A] An electric fire comprises a plurality of parts that can be easily assembled. The fire 100 includes a chassis 105 configured to define the back and side walls of the fire. The roof and floor of the fire are provided by upper and lower sub-assemblies 130, 131 which have been previously moulded so as to provide a housing for the electrical and moveable parts used in the operation of the fire. The sub-assemblies are mountable to and supportable by the chassis, where the sub-assemblies and the chassis combine to define the exterior of the fire. Preferably, each of the sub-assemblies is formed from a plastics material. Decorative trims may also be provided which can be attached during the assembly process.
