Abstract (en)

[origin: EP2027912A1] The system has a base plate (104) arranged in a device component and comprising an inlet opening to supply binder-components from a storage container (90). The plate has another two inlet openings for supplying hardener components from storage containers (91, 92). Outlet openings are connected with the inlet openings, and a mixing device (1) is connected to the plate. The device has stator and rotor parts, and mixing sprockets are formed at the rotor part. The sprockets extend into a mixing chamber for moving mixing sprockets that are arranged at the stator part so as to mix the components.
