Abstract (en)
An expansible bottle stopper includes a body (1, 4), a resilient member (2, 5), and a movable member (3, 6) that is longitudinally movable relative to the body (1, 4). The resilient member (2, 5) is caused to expand radially by a first-stage longitudinal displacement of the movable member (3, 6) relative to the body (1, 4) or to shrink radially by a second-stage longitudinal displacement of the movable member (3, 6) relative to the body (1, 4).
