Abstract (en)

Equipment for collecting fluid fatty household waste (22), having a collection tank (20), an enclosure (10) formed to receive the collection tank (20) and a support (16) to support the collection tank (20). The top (12) of the enclosure (10) has an aperture (14), which is closed by a cover (70) that can be opened by sliding. There is a downwards narrowing funnel (50) placed at the aperture (14), and a valve (60) is connected to the lower end of the funnel (50, and the rod (65) of the valve (60) is guided by sleeves (53, 55) in a sliding manner along the axis. There is an arm (66) connected to the upper end of the rod (65) by its first end. The second end of the arm (66) co-operates with a sliding path (74) arranged at the underside of the cover (70) in such a manner that when the cover (70) is slid from the position when it is closing the aperture (14, it turns the arm (66) so that the first end of the arm (66) moves the rod (65) of the valve (60) upwards, towards closing of the valve (60). There is a transmitter (30) in the enclosure, which transmitter (30) is connected to the level sensor (32) detecting the level of the fluid household fat (22) in the collection tank (20).
