Abstract (en)
[origin: EP2028314A1] The drier has a carbon contact holding arrangement (3) arranged at a supporting part, and a carbon contact (5) arranged on a longitudinal axis (7) of a retainer (6). The carbon contact is movably guided in a radial direction of a washer drum (2), where the longitudinal axis runs under an angle to a perpendicular cross-sectional plane of the drum. The supporting part is designed as a supporting arm formed in the direction of the longitudinal axis of the retainer, where the supporting part is fixed to a housing of the drum by using a fastening section and is provided with a clamping bracket.
