Abstract (en)

[origin: EP2028319A1] The milling device has a bearing plate (10) and an adjustable cutting tool (20), which is rotatably stored at the bearing plate. The cutting tool describes a path curve, which rotates at the bearing plate. The adjustable cutting tool is adjusted between a retracted position for rotating over the cutting tool at the bearing plate and an operating position for carrying out of earth material applied at the bearing plate. The bearing plate comprises a recess (30) in the area of the path curve of the adjustable cutting tool. An independent claim is included for a method for providing a foundation element in the earth.
