Abstract (en)

[origin: EP2028323A2] The device has a set of actuating keys (3, 4) movably guided into a base body, and a set of actuating covers (2) for covering the actuating keys. The actuating covers are rotated around an axis perpendicular to a plane and are detachably connected with the actuating keys, where the detachment of a connection takes place only by a side of the device. The side is turned towards an inspection chamber. A locking connection is made between the covers and the keys, and a set of latching hooks (11, 12) is elastically supported on the actuating keys.
