Abstract (en)
[origin: EP2028333A2] The cover has covering elements (3, 4) made of a honey comb sheet material, and a drive (6) for pivoting the covering elements in a resting position at an external side wall of a spa bath (1). The adjacent covering elements are connected to each other by a hinge (7). The drive includes a pivot (15) in a region of an upper side edge (11) of the spa bath, where the covering elements are commonly pivoted around the pivot in the resting position. The drive is provided for folding the cover that is lifted before being folded up from a natural position i.e. horizontal position.
