Abstract (en)

[origin: EP2028732A2] The method involves feeding a cable (1) into a cable cutting and manufacturing device (3) with the help of a cable feeder (2). The rear end of the swiveling arm (6) is conveyed in a position over a collective channel (11), which is arranged parallel to the conveyer belt. The gripper (6.1) of the swiveling arm (6) is opened. The rear end is discharged into the collective channel. The swiveling arm (6) is swiveled back into the base position inverse to another swiveling arm (5). An independent claim is included for a device for manufacturing section of cable and subsequent preparation of section of cable at its front and rear ends.
