Abstract (en)

[origin: EP2028775A2] The method involves utilizing a display (34) of a mobile terminal combined with menu control keys (39, 40) as a selection device for selecting a transmitter from a transmitter schedule at a side of a web server (42). A message is transmitted to the server over a radio network for identification of an analog signal and for downloading the identified analog signal. The message is provided with data about a time point of the actuation of the control keys, and is stored in a secure digital memory card (15) provided in the terminal for transmission of the signal to the server. Independent claims are also included for the following: (1) a program implemented on a mobile terminal for realizing a method for marking an analog signal (2) a system for realizing a method for marking an analog signal.
